Description of methodology (methods, tools & material used, etc)

Supportive supervision is a process of helping staff to improve their own work performance continuously. It is carried out in a respectful and non-authoritarian way with a focus on using supervisory visits as an opportunity to improve knowledge and skills of health staff.

therefore ISDP Malaria BCC project coordinator & Health Supervisor Officer has been carryout support supervision in the field in Mudug including Burtinle which is under Nugaal Region, the support supervision visit takes 5 days from 20th -24 Sept 2022.the supervision was covered 6 MCHs under Balidhidin,Hiriro,Iskushuban and Ufayn Districts.

During Supervision:

During monitoring and supervision, we met with MCHs/ PHC staff of districts and we explained them the aim of our visit and discussed how they support outreach staff smoothly implementing Malaria awareness to the community, they have shown that they are ready to work with malaria awareness on which they are working. all health facilities we visited have enough stock of RDT and ACT.

The continue to Assessment performances of Community Educators aspects of Malaria BCC routine activities and strategies for implementation.

37 mothers visited Health Facility during supervision have been asking a question on malaria related for to assess their knowledge about this malaria disease, most of them showed they have basic knowledge for malaria treatment and prevention.

Community Educators:

During the supervision We seen malaria outreach staff (Community Educators) in the areas we visited and we briefed them on the malaria situation in Puntland. Community Educators were on duty, visiting homes to teach families how to prevent malaria. They doing Door to Door visit giving malaria awareness to Household members.

We also asked them about the challenges they face when they doing homes visit. they stated that they sometimes met pastoralize families who had migrated and moved after their livestock ran out due to the drought. they also pointed there is highly demands in community which we could not provide them.

COVID-19:

It appears that in the community have become adapted to covid-19 and are not taking the basic steps to prevent it.

Constraints

- Most of community remain demand livelihood intervention.
- There is very big drought in all puntland regions and many pastoralize population come at around villages after their livestock runaway.

Recommendations

- ISDP will continue and accelerate the Community Awareness on Malaria prevention and control and Diagnosis and treatment as well and will give special consideration to new settlement of pastoralize people those are around villages.
- to Encouraging community taking basic preventive measures of Covid-19.
