Description of methodology (methods, tools & material used, etc)

ISDP's Malaria program is to ensure by 2023, children under 5, male and female adults living in malarias areas have access to appropriate malaria prevention, diagnosis and treatment services decrease the number of Malaria effected people to 1 in 1000.
To ensure these objectives are accomplished ISDP is obliged to implement Malaria BCC activities cooperating with the ministry of health executing Community dialogue, Malaria Field-day, Door-to-door Malaria BCC lessons and Support &supervisions.
ISDP Malaria Project Coordinator and Malaria SBCC field coordinator carryout implementing partner supervision activity at Garowe, Gardo, Dangorayo, Armo,Waiye and Celdahir districts and the field visit will take 5 days from 22-26 February 2023.

During supervision.

The ISDP team met with health workers in the areas they visited and explained the purpose of their visit by sharing the malaria situation in Puntland and how to encourage community early diagnosis, treatment, prevention and control. we also met with malaria educators in the areas they visited and listened to how activities going on, their outreach work and if there are any challenges they face during their outreach and home visits
During field visit the supervisors met with Regional Health Officers of supervised location.
We are very grateful to all the staff of the health centres', the community mobilizers for the malaria we met during our field visit for quarterly supervision we met the community mobilizers for health program, we explained BCC activities that we are supervising now and how they as mobilizers take part to eliminate malaria our country.

The Supervisors have short meeting with community Educators and appreciated the outreach activity they are doing which is monthly basic and we encouraged to continue and accelerate especial upcoming rainy season because stagnant water during rain contribute malaria breeding sites which increasing mosquito population. have knowledge about malaria.

Supervision Findings.

- .
- Community Elders we meet during supervision demanding livelihood intervention at IDPs.
- Community Elders demanding other intervention.
- The RDTs and ACTs were available at all supervised Health facilities

Constraints

Luck of Motivation among Malaria Community Educators.
Outreach workers do not have PPE for Covid-19.
Low knowledge for mosquito larva source and how they manage in community level specially internal displaced people.

Recommendations

- community awareness on malaria Diagnosis, Treatment, prevention and control should be accelerating.
- Educating community for larva source and how they can manage.
- Prevention of COVID-19 should be continuing.
