# of participants *	40	# & type of facilities	Health centres

Description of methodology (methods, tools & material used, etc)

Narrative report about training:

Community based Malaria trainings were held from January 22th to 26th, 2023, at around 8:00 a.m., under the coordination of ISDP and Following that, (Dr. Mohamed welcomed the participants and emphasized the importance of the workshop as well as the goal of the training. They also mentioned the Burden of malaria in Puntland regions and as well Somalia.

The training session then began with the introduction of the participants by recording their names and localities on the attendance sheet.

A quick pre-test with 15 questions was administered by trainers to assess trainees' previous understanding of the subject matter and how much they already know about some of the subjects to be covered in the training session.

The trainer, in cooperation with the trainees, establishes the fundamental criteria that will be followed during the training days in order to maintain a productive and well-organized training program. The participants agreed on various ground rules for the course, such as turning off their phones, arriving on time, respecting others' opinions, not interrupting while others speak, and so on. For the remainder of the session, these principles were written on a flip chart and taped to the wall.

The participants were then questioned about their expectations for the program and what they anticipated to learn over the course of five days. Each trainee expressed their thoughts, which they also jotted down in the space allotted in their workbooks and pens.

Following this, the trainer continued the lesson by presenting the main aim of the Community based Malaria control and overviews of the project and what the trainees would learn about it, by highlighting significant themes to be addressed throughout the five days of training.

Timetable: The training session was held for seven days in a succession, with MCH workers from three districts participating: **Bari, Gardafuu, Karkaar and Nugal region**. The training took place from January 22th to 26th, 2023. The session would begin at 8:00 a.m. and terminate at 3:00 p.m. every day. Every day, at 10:00 and 10:15 a.m., there were coffee breaks. Every day, from 12:00 to 1:00 p.m., there was a one-hour lunch break and Prayer.

The Objectives of the training workshop included the following:

At the end of the training programme participants should have acquired the knowledge and skills ~~to~~ to: explain to community members:

- Help participants acquire the Understand of Malaria Concepts
- Help participants acquire the Skills and motivation of healthcare workers of improving strategically for Community Based Malaria Control
- Help participants explore tested and innovative strategies for improving the management of the Malaria Prevention Including LLLN and others Preventing Measures.

Participants Expectations

The Training Workshop's Malaria session began with an overview of the participants' expectations.

The expectations were discovered to be in accordance with the workshop's goals.

Participants were advised to keep a close eye on the session and alert the facilitator if any expectations were not being met.

Topics covered and methods used during the intensive week

- What spreads malaria.
- The signs, severe symptoms and risks of malaria.
- How to test and treat malaria.
- How to prevent malaria.
- How pregnant women can prevent malaria.
- Different vector control methods.
- How to hang and maintain an LLIN.
- How effectively educate and mobilize communities.
- How to plan malaria control activities?
- How to report these activities?
- How to use the Malaria Control Program Chart Set?

Methodology: - participatory.

- Introduction.
- Brain storming
- Open discussions.
- Experience sharing.

- Group work and finding work presentation
- Role plays and practice
- Daily based Recaps of previous presentations

Training Achievement

- a) The refresher training was completed effectively, and all participants participated actively during the five days of instruction.
- b) The findings of the pre-test and post-test revealed that there were ideas and themes that the participants were unfamiliar with before to the training, and that after the training ended, they were able to describe the topics more effectively.
- b) All participants have received their reading materials in soft copy.

Constraints

Challenges encountered during training include

1. The majority of participants face difficulties with the English language.
2. Low session participations due to the participant's knowledge about this advanced course.
3. In general, the participants had time management and attendance challenges, particular those from the Bosaso Districts

Recommendations

The Training Manual should be translated into Somalia, as the majority of participants difficulty with English.

Low session participation owing to participants' lack of understanding about this advanced subject, indicating the necessity for further training to develop their knowledge and adaptability abilities.

should allow time for participants from their workplaces to attend training days as well.

Results of the pre- and post-tests

Training evaluation:

All of the target trainees were present during the training, which was held in their respective districts. The training lasted 5 days, and there was a Pre-test assessment with an average scored of 47%, as well as a post-test evaluation at the end of the course with a score of 69% percent, indicating a gain of 22percent in knowledge as a consequence and outcome of the training.

The graph below shows a pre-test assessment with an average score of 47% and a post-test evaluation at the conclusion of the course with a score of 69% percent, suggesting a gain of 22% in knowledge as a result and outcome of the training.

Closing training workshop Ceremony:

The training was officially closed by Farah Osman from the ISPD, the Malaria Project Co-ordinator, who thanked the participants(trainees)for their patience in receiving Malaria training, which will assist them in starting the real implementation of community level Mobilization and MCH facilities level. the Participants enjoyed the skills and information obtained, knowing that they would be able to carry on from here and contribute to the larger project aim of reducing Malaria Morbidity and Mortality in their respective community and Puntland as a whole as Somalia.

Appendix 1 Training Photos

Group discussions are taking place among participants.

Individuals among the Group are presenting in their Group work and discussion findings.

Group discussions and find presentations are taking place among participants.

The participants are Taking the Posttest exam

Malaria-Towards an Accelerated and Coordinated path to National Elimination (Malaria BCC-2021-2023)
Community educators refresher training 22-26 January 2023.
